

Know the current value of recycled plastics in all of its forms – scrap, flake and pellet, from post-consumer and post-industrial sources.

Recycled Plastics Weekly contains more than 40 weekly assessments for pellet [repro], flake [regrind] and scrap bales, plus assessments and market news on post-consumer resin [PCR], including HDPE and PP.

Market Challenge

Plastics recycling is a massive growth industry worldwide with a long-standing challenge: preventing single-use plastic from becoming litter by turning it into a commodity. The key to profit in this business is access to transparent pricing for a wide variety of grades that only a specialist publication can offer.

How We Help

Published every Thursday, Global Recycled Plastics Weekly provides accurate and unbiased pricing for this booming market in an easy-to-read, PDF format. By standardizing grades, delivery location and applying other specification standards (color, glass content, etc.), the commodity values assigned to each resin listed in the report provide the most clarity and insight available to the industry.

Benefits

- Graphs and tables show historical price moves for long-term perspective
- Exclusive news on force majeure and other plant disruptions, closures, openings and expansions
- Import and export data on plastic scrap, including PS, PVC, HDPE, PET, unsorted and prime PET resin
- A recap of confirmed spot market deals and results of bale auctions.

Who We Help

- Plastic Manufacturers
- Plastic Recyclers
- Solid Waste Managers
- Brokers Distributors
- Municipalities
- Financial Institutions

Commodities

- Polyethylene
- Polypropylene
- Polystyrene
- Nylon
- PET
- PVC
