

OPIS Global Carbon Offsets Report

Manage commitments to carbon neutrality and gain visibility into voluntary carbon markets and net-zero strategies with transparent price benchmarks, including North American Improved Forest Management (IFM).

OPIS Global Carbon Offsets Report helps sellers unlock investment potential and enables buyers to make informed purchasing decisions with trusted market benchmarks.

Market Challenge

As jurisdictions chart pathways to net zero, airlines, for example, are preparing for CORSIA compliance. Yet a lack of price transparency can make it difficult for market participants to trade carbon offset credits fairly and secure financing for future projects. In fragmented, largely over-the-counter markets such as North American IFM, buyers and sellers need trusted benchmarks to make informed decisions.

How We Help

OPIS Global Carbon Offsets Report meets the demand for transparent voluntary carbon market pricing. A daily report provides physical price assessments across voluntary and compliance carbon markets, including North American Improved Forest Management (IFM), REDD+, CORSIA-eligible offsets and California Carbon Offsets. Alongside pricing, the report delivers breaking news, a transaction deal log and insight into market trends and fundamentals affecting supply and demand. These resources support market participants in contract negotiations, investment decisions and supply-agreement structuring.

Benefits

- Discover the baseline cost for providing environmental services to counterparties
- Agree on a fair price premium for retiring carbon credits to attain carbon neutrality in the fuel supply chain
- Secure investment for new and existing emissions-reduction projects using a transparent pricing index
- Maximize value by referencing OPIS carbon offset credit prices in supply contracts
- Obtain fair-market value for offset credits acquired in the OTC market
- Benchmark North American IFM pricing to support procurement, valuation and trading decisions
- Determine the cost impact of climate initiatives aligned with Paris Agreement goals
- See a complete view of the California Carbon Offsets (CCO) markets, including price assessments for offsets that have a direct environmental benefit in the state (DEBS CCO)

OPIS Global Carbon Offsets Report

Who We Help

Fuel Buyers & Sellers | Net-Zero Buyers | Project Developers | Brokers/Consultants | Traders | Researchers/Analysts | Transportation | Jurisdictional Agencies

Carbon Neutral Fuels Index

Provides daily assessments for the cost of offsetting combustion emissions to zero for 18 standard liquids and gaseous fuels, as well as eight international fuels.

Carbon Offsets Trades Deal Log

Provides a 30-day record of confirmed transactions in the offset credits market.

Daily physical assessments for voluntary carbon offset credits and compliance carbon offset credits

- **OPIS Voluntary REDD+ Credits:** Produced by nature-based projects for Reducing Emissions from Deforestation and Forest Degradation.
- **North American Improved Forest Management (IFM):** Daily pricing that brings clearer benchmarks to a fragmented, largely OTC market, with more granular visibility by credit type.
- **OPIS CEO (CORSIA Eligible Offsets):** Reflects methodologies specified by the International Civil Aviation Organization (ICAO) for assets that comply with the Carbon Offsetting and Reduction Scheme for International Aviation (CORSIA).
- **OPIS Core Carbon Credits (OPIS CCP):** Reflects trading for standard carbon credits, including CORSIA-eligible credits, REDD+ credits and other AFOLU credits.
- **OPIS Climate, Community & Biodiversity Standards (OPIS CCB):** Reflects the co-benefits price premium for Verified Carbon Units (VCUs) certified by Verra's Climate, Community & Biodiversity Standards Program.
- **California Carbon Offsets:** OPIS CCO and CCO with a Direct Environmental Benefit in the state (OPIS DEBS CCO).
